

Why are we doing this in Vision Therapy?

Cognition's foundation lays heavily on vision

This activity helps develop the visual skills that are foundational for working memory, sequential memory, and spatial memory. These are constant cognitive responsibilities that are necessary for academic success in school. Kids love this activity because it helps them discover the continuity of related concepts - it makes school easier and more fun!

What: *The Multi-Matrix Game*

When: When there is difficulty with working memory, sequential memory and spatial memory

Who: For those who have difficulty with sustained attention, test taking endurance and memory.
